LESSARD, COPPER-ZINC-SILVER PROJECT

DRILLING REPORT

Drilling on the historic VMS deposit at Landore's Lessard property, located approximately 107 kilometres north of the town of Chibougamau, in the province of Quebec, has confirmed the presence of high grade zinc mineralisation, including an interval in drill hole 0906-07 grading 48% zinc over 0.5 metres.

Mineralised intersections include

Drill-hole	From	Width	Zinc	Copper	Silver	Gold
No	Metres	Metres	%	%	gpt	gpt
0906-02	85.2	0.9	7.13	1.15	107.0	0.46
0906-03	143.8	9.2	5.33	0.89	23.3	0.30
includes	149.1	2.3	16.94			
0906-04	286.8	1.6	1.42	2.06	68.3	0.80
0906-05	381.5	2.9	5.61	2.42	122.0	0.60
0906-06	220.7	6.1	5.96	1.89	39.1	0.70
0906.07	337.5	3.4	12.36	0.22	15.6	0.10
includes	381.5	0.5	48.00			

The Lessard property, comprising 91 claims for 1,456 hectares, hosts a copper-zinc-silver deposit with a historic resource reported in a feasibility study in 1975 by Selco Mining Corporation Ltd of 1,463,835 tons at 1.73%Cu, 2.96%Zn, 1.1oz/t Ag and 0.019oz/t Au after allowance for dilution. (The resource is not compliant with National Instrument 43-101).

A Geotech VTEM penetrating time-domain airborne electromagnetic and magnetic survey was carried out, in late April 2006, over the entire property. The survey highlighted

possible strike extensions of the existing resource and also developed new targets for follow-up exploration.

A drilling campaign consisting of 7 holes of NQ size core for 1,731 metres has recently been completed along the extent of the historic resource. The results generally confirmed the previous drilling carried out by Selco Mining.

In addition, hole 0906-07 which was designed to target a large gap in the previous drilling, intersected sulphide breccia over 3.4 metres including semi massive sphalerite over the lower 0.5 metres (assayed 48% zinc). The historical and current drilling results indicate that the resource is open along strike to the south and north at depth.

A second drilling campaign is planned for early 2007 to target possible strike extensions of the existing resource, for exploration of other targets generated by the airborne survey and to provide core for metallurgical studies.

The positive results from the recent confirmation and infill drilling, is sufficiently encouraging for Landore to advance the Lessard deposit towards possible development. Accordingly an independent consultant will now be engaged to prepare a NI 43-101 compliant technical report.

James Garber, (BSc. Hons. Geology, member of APGO) a Director of Landore Resources Ltd and a qualified person as defined in National Instrument 43-101, has reviewed and verified all scientific or technical mining disclosure contained in this press release.
