## JUNIOR LAKE

### INTERIM DRILLING REPORT-VW ZONE.

Drilling on the VW Zone nickel discovery at Ketchikan Lake, toward the southeastern end of the Junior Lake property, Ontario Canada, continues to intersect horizons hosting wide intervals of sulphide mineralization with assay results consistently returning grades in excess of 1% nickel.

Mineralized intersections in the first six holes include:

Drill-hole No	From Metres	Width Metres	Nickel %
0406-48	184.0	3.2	0.78
includes	186.0	1.2	<b>1.00</b>
0406-49	17.2	2.3	0.59
	96.5	1.5	0.81
0406-50	10.4	9.1	0.66
includes	16.1	3.4	0.82
includes	17.0	1.0	<b>1.40</b>
	25.5	3.0	<b>1.08</b>
0406-51	149.2	2.7	0.52
	155.4	0.2	<b>1.43</b>
0406-53	145.3	6.2	0.78
includes	146.8	2.8	<b>1.21</b>
	169.5	1.5	<b>1.28</b>
0406-54	83.8	11.5	0.55
includes	89.6	2.8	<b>1.00</b>
	113.2	6.1	0.65
includes	117.4	1.9	<b>1.01</b>

Note: Results for hole 52 are pending.

The Junior Lake properties are located in the province of Ontario, approximately 235 kilometres north-northeast of Thunder Bay and are situated within the Caribou-O-Sullivan Greenstone Belt in the Wabigoon Subprovince.

Two drilling campaigns, completed in 2005, successfully identified numerous nickel occurrences, including the significant discovery at the VW zone, which reported grades of up to 3.7% nickel and 1.18% copper with gold of up to 0.68g/t in separate intersections.

A diamond drilling campaign, proposed at 8,100 metres of NQ sized core, is in progress on the Junior Lake properties comprising 5,000 metres of infill drilling on the VW zone and 3,100 metres of exploration drilling to test prospective trends along strike from the VW zone and other favourable targets.

To date, approximately half the proposed program has been completed, with 13 holes (0406-48 to 60) for 2,991 metres on the VW Zone and 5 exploration holes (0406-61 to 65 for 1,072 metres.

Mineralized horizons, interpreted for the VW Zone in the 2005 drilling campaigns, appear to persist along strike and down dip and show preliminary indications of strengthening to the west.

Further releases will be made during the summer period as drilling continues.

**James Garber, (BSc. Hons. Geology, member of APGO) a Director of Landore Resources Ltd and a qualified person as defined in National Instrument 43-101, has reviewed and verified all scientific or technical mining disclosure contained in this press release.**
